Dear Mr. Douglass:

RE: 18-510 (A59782  
Power- Granite Creek

I have received the information concerning the FERC approval for your proposed power installation on Granite Creek. I suspect the State Engineer will not act on your power application until the irrigation systems of both parties are on line. This would, of course include the processing of permanent change applications that each party has filed.

I am glad, however, to hear that you have weirs installed in both creeks. Be sure to record your weekly measurements from both streams as this will help secure data on the flow characteristics of these streams. For irrigation and winter use data, the installation of an in line flow meter would be best to secure the acre-foot deliveries of both streams, otherwise, you would need a daily reading off from the weirs to obtain this information.

Yours truly,

A handwritten signature in black ink, reading "William L. Burton".
